

Streamlining Process with ReQlogic

Rich Fowler

2010

ReQlogic

- Requisitioning, Procurement and Workflow
 - for Dynamics™ GP & SL

What is ReQlogic?

- 100 % Web-Based
- Requisitioning
- Expense Reporting
- Workflow
- Vendor Invoice Management
- Built on the Microsoft .NET Framework (Object Oriented)

Real Time Integration

- Data is all held in a single place
- No duplication
- Data validated at entry time
- Business Rules enforced

From 60,000 feet

- A **requester** enters a transaction from anywhere in the world and submits it for review
- A **reviewer** gets an e-mail notification and can log in and either approve or reject
- A **buyer** selects approved requisition lines and includes them in Purchase Order(s) or fulfills from internal Inventory

Advanced Routing

- Unlimited policies
- Unlimited approval levels
- Flexible
- User defined, parameter driven
- Nested, sequential, parallel
- Criteria - any field in any table
- Multiple 'route to' options

Attachments & Notes

- Unlimited Attachments
- Header or Detail
- Multiple Notes – unlimited text

Transaction Review

- Reviewers can
 - approve
 - reject
 - modify

 - each line
 - entire transaction

PO Creation

–Approved requisitions

- Buyer Review
- Final edit
- Select for PO
- Consolidate
- Fulfill from Inventory

Customization/ Configuration

- Text (labels, messages)
- Views (lookups)
- Field level
- User interface
- E-mail notifications
